***Election/Restrictions***

1. Claims <sup>10</sup>1-~~20~~, drawn to a system for facilitating chemical supplier transactions, classified in class 705, subclass 28 .
2. Claims 11-19, drawn to to a banking computer network, classified in class 705, subclass 39.
3. Claims 20-25, drawn to a method for facilitating chemical supplier transactions between members in a trading network, classified in class 705, subclass 37.
4. Claims 31-34, drawn to a method for facilitating chemical supplier transactions between members in a trading network through use of a clearing house, classified in class 705, subclass 37.

The inventions are distinct, each from the other because of the following reasons:

Inventions (I or III or IV) and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects.

Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be done by hand.

Inventions II and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this the apparatus can be used to practice another and materially different process, i.e. non XML formats.

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of claim has separate utility such as use over paper mail network. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the searches required for any one of Groups I-IV is mutually exclusive.

A telephone call was made to Dennis Rainer on 3/29 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2164

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
